

name : Psenhil Kumar

Batch : 12 to 2.

: frontend

1. What is HTML what does HTML stand for?

\* (HTML stands for Hypertext Markup Language)

\* HTML is used to create structure of webpage. It tells the browser how the content of the webpage should be displayed.

2. Why is HTML called a markup language? Is HTML a programming language?

\* HTML called markup language because it uses tags to mark and structure content on a webpage.

\* HTML is not programming language because it does not perform logical operation like loops, conditions or calculation. It is mainly used to structure of web content.

3. What is the difference between an HTML tag and an HTML element?

\* A tag is markup written inside angle brackets.

HTML elements -

\* An HTML element includes the opening tag, content, and closing tag.

\* `<P>` → opening tag.

\* `</P>` → closing tag.

4. what is `<!DOCTYPE html>` is an HTML tag?

\* `<!DOCTYPE html>` is declaration That tells The browser That The Document is an HTMLS document it should be Placed at The top Of HTML Document.

\* No, it is not an HTML tag. it 's Declaration.

5. Explain The basic structure Of an HTML document. What are The Purposes Of `<html>`, `<head>`, and `<body>`

`<html>` -

\* its a root element Of The HTML document  
All HTML Content is Placed inside it.

`<head>` -

\* It contains informations.

\* Title.

\* meta information

\* CSS links

\* javascript links.

\* it contains all The visible content

\* Heading.

\* Paragraph.

\* image.

\* buttons.

\* Links.

6. what are HTML attributes? explain with an example.

- \* HTML attributes provide additional information about an HTML element.

- \* They are written inside the opening tag

`<a href = "https://example.com">Click Here</a>`

~~href~~ href → Attribute

- \* `"https://example.com/"` = Attribute value.

- \* src and alt are attributes

`<img src = "image.jpg" alt = "Beautiful image">`

7. What is the difference between src and href?

- \* src stands for source

It is used to embed or load a resource into a webpage.

Example -

`<img src = "image.jpg">`

- \* href stands for Hypertext Reference

It is used to create link to another webpage or resource.

Example -

`<a href = "http://google.com">Google</a>`

- \* src → load a resource

- \* href → Create a link to another resource

8. what is the Purpose of the alt attribute in an `<img>` tag?

- \* The alt attribute provides alternative text for an image

- \* it is displayed or used when the image cannot be loaded and helps screen readers understand the image

9. explain the difference between Block level element and Inline elements with examples

Block level elements:-

- \* `<div>`

- \* `<p>`

- \* `<h1>`

Inline elements:-

- \* `<span>`

- \* `<a>`

- \* `<strong>`

These can appear on the same line

10. what is semantic HTML? what is the difference between semantic and non semantic elements

Semantic HTML:-

Semantic elements clearly describe the meaning of the content

- \* `<header>` \* `<nav>` \* `<article>` \* `<section>`
- \* `<footer>`

Non Semantic HTML:-

Non semantic elements do not describe the meaning of the content

- \* `<div>` \* `<span>`

- \* semantic  $\rightarrow$  Describe the meaning of the content

- \* non semantic  $\rightarrow$  Do not describe the meaning of content

11. what is the difference between `<div>` and `<span>`?

`<div>` -

- \* Block level element.

- \* starts on new line

- \* used to group larger section of content.

`<span>` -

- \* inline element

- \* Does not start on new line

- \* used to style or group small part of text

Table -

```
<table border="1">
```

```
  <thead>
```

```
    <tr>
```

```
      <th> name </th>
```

```
      <th> Age </th>
```

```
    </tr>
```

```
  </thead>
```

```
  <tbody>
```

```
    <tr>
```

```
      <td> satish </td>
```

```
      <td> 20 </td>
```

```
    </tr>
```

```
  </tbody>
```

```
  <tfoot>
```

```
    <tr>
```

```
      <td> total student </td>
```

```
      <td> 1 </td>
```

```
    </tr>
```

```
  </tfoot>
```

14. What is the Purpose of `<meta charset="UTF-8">` and the ViewPort meta tag

\* The `<meta charset="UTF-8">` tag is used to specify the character encoding of HTML document

\* English characters

\* Tamil characters

\* Other language

\* Special symbols

ViewPort meta tag -

\* The ViewPort meta tag helps a webpage display properly on mobile phones, tablets, and different screen size.

meaning -

\* width=device-width >The webpage width adjusts to the device screen width
